

Year 4 Geography - Natural Resources

Non-renewable energy sources

Once these resources are used up, they cannot be replaced, which is a major problem for humanity as we are currently dependent on them to supply most of our energy needs.

Natural Resources

Natural resources such as oil, water, soil, minerals, wind and sunlight are used by humans to survive. They can be used to heat our homes, feed and clothe us and even transport us around the world. These resources are materials or substances that are produced by the environment.

Vocabulary :

Fossil fuels	A natural fuel such as coal or gas, that is formed in the geological past from the remains of living organisms.
Wind power	A form of energy that comes from sources of wind.
Sustainable	To develop a sustainable future you need to think about meeting today's need and protecting the environment and resources for the future.
Environment	The surroundings or conditions in which a person, animal, or plant lives or operates.
Global warming	Is the long-term heating of the Earth's surface due to human activities.
Carbon dioxide	Is an important heat-trapping gas, also known as a greenhouse gas, that comes from the extraction and burning of fossil fuels.

Renewable energy sources

A resources which can be used repeatedly because it is replaced naturally.

What is geothermal energy?

Geothermal energy is the heat produced deep in the Earth's core. Geothermal energy is a clean, renewable source of energy.

What countries use geothermal power?

Iceland and New Zealand are two countries which successfully use geothermal power to help heat their homes.
